c1_split_data.m

```
%{
Description:
    Reads source data collected in Cadende, resamples them at a constant
    frequency, splits into 3 segments and saves them to .mat files.

Input:
    - lte_real.csv
    - lte_imag.csv
    - wlan1ln_real.csv
    - wlan1ln_imag.csv

Output:
    - source_signal_1.mat
    - source_signal_2.mat
    - source_signal_3.mat
    - source_signal_complete.mat
}%
clear; clc; close all;
tic
```

Parameters

```
freq_baseband = 123e6;
num_of_points = 5000;
```

Functions

```
current_folder = fileparts(mfilename('fullpath'));
root_folder = fileparts(current_folder);
functions_folder = fullfile(root_folder, 'f0_functions');
addpath(functions_folder);
```

Importing data

```
[s1_time, s1_amp] = read_complex_csv('lte_real.csv', 'lte_imag.csv');
```

```
[s2_time, s2_amp] =  
    read_complex_csv('wlan11n_real.csv', 'wlan11n_imag.csv');
```

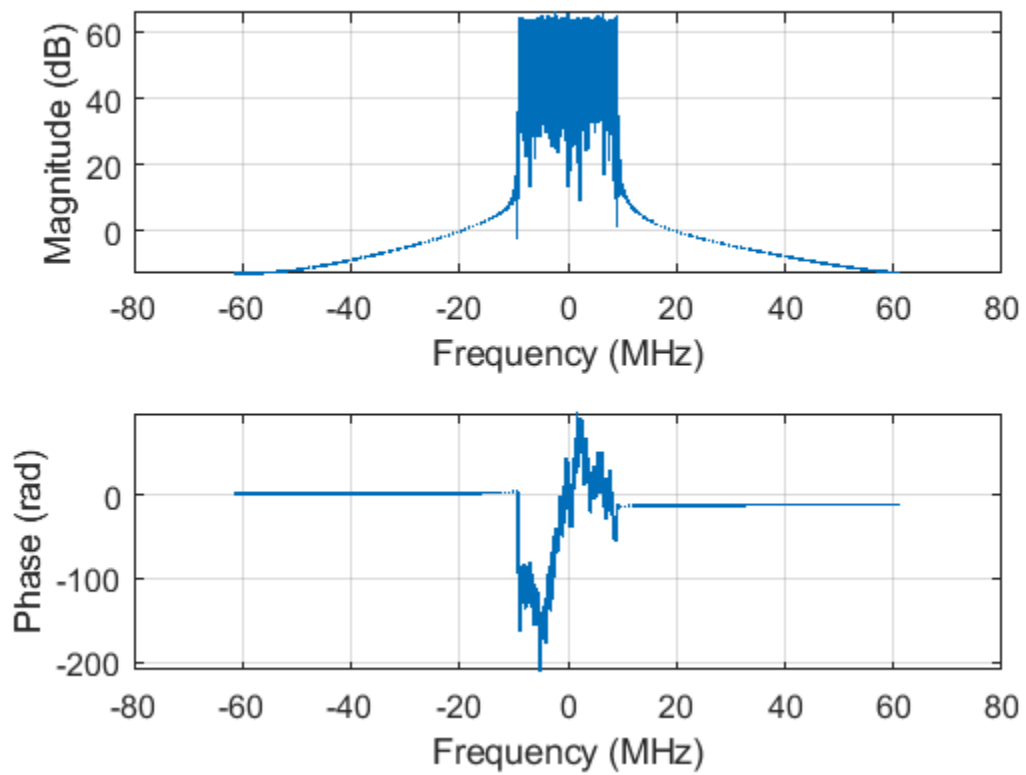

Data parameters

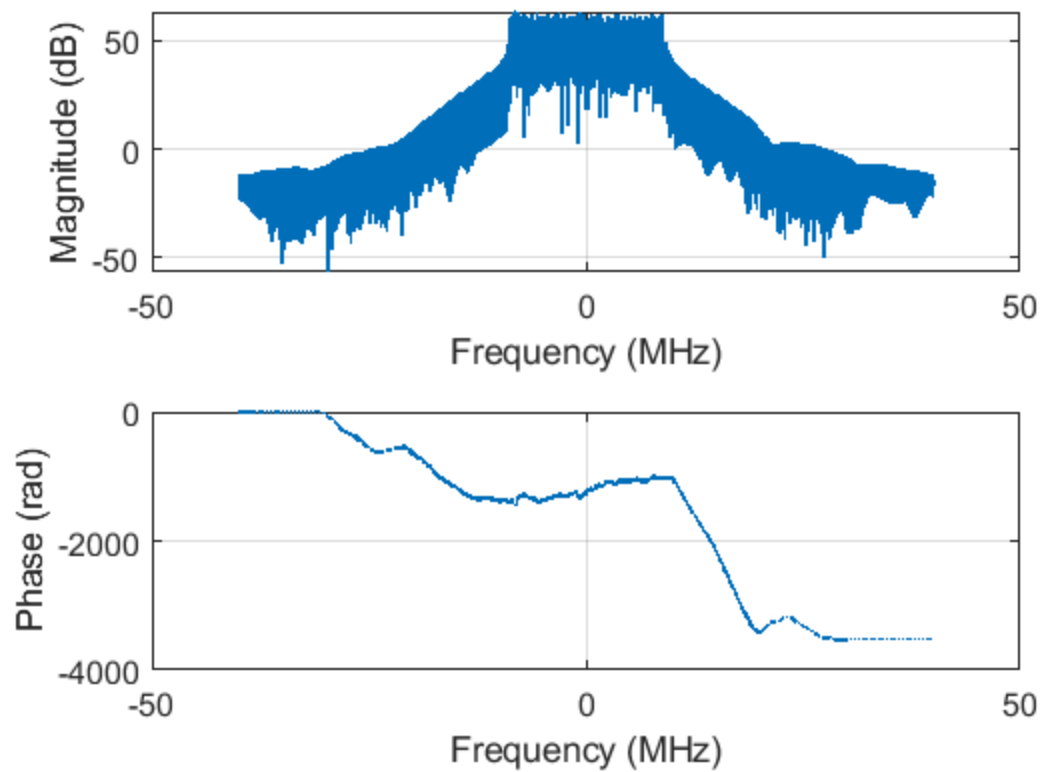

Number of points

```
s1_N = length(s1_amp)  
s2_N = length(s2_amp)  
  
% Time duration  
s1_duration = s1_time(end)  
s2_duration = s2_time(end)  
resample_duration = min(s1_duration, s2_duration)  
  
% Average sampling frequency  
freq_sampling_1 = s1_N/s1_duration  
freq_sampling_2 = s2_N/s2_duration  
  
s1_N =  
  
    122881  
  
s2_N =  
  
    80001  
  
s1_duration =  
  
    0.0010  
  
s2_duration =  
  
    0.0010  
  
resample_duration =  
  
    0.0010  
  
freq_sampling_1 =  
  
    1.2288e+08  
  
freq_sampling_2 =  
  
    8.0001e+07
```

Plot

```
plot_spectrum(s1_amp, freq_sampling_1, 'Signal 1')  
plot_spectrum(s2_amp, freq_sampling_2, 'Signal 2')
```

Resample

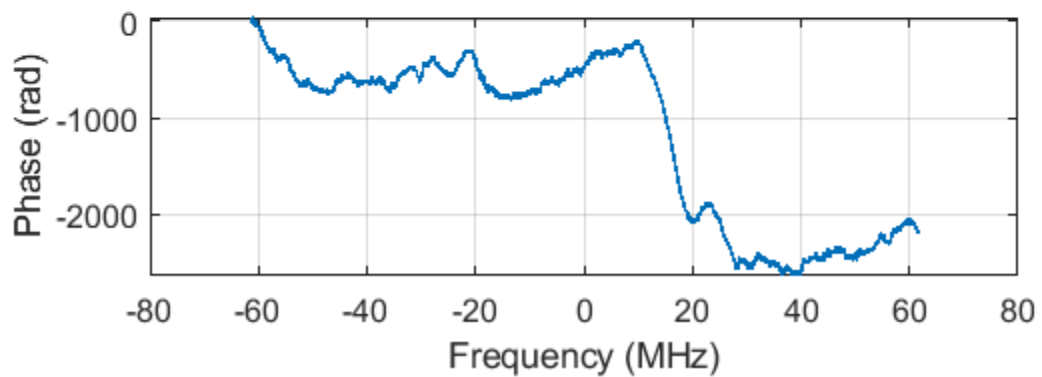

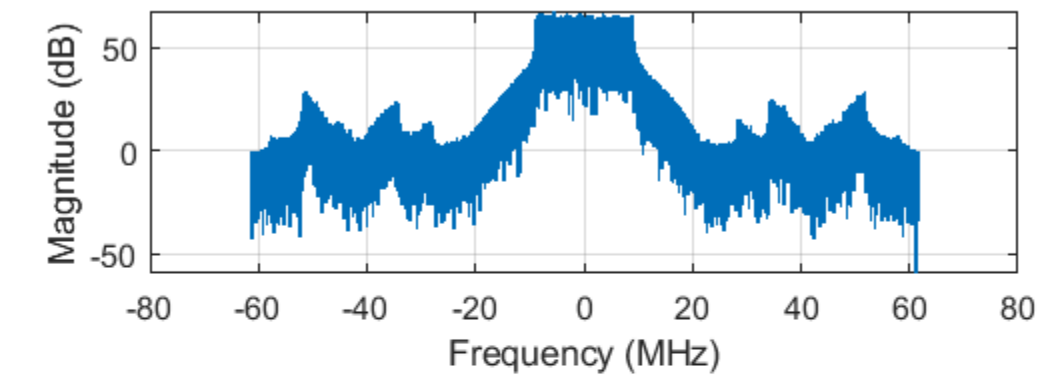

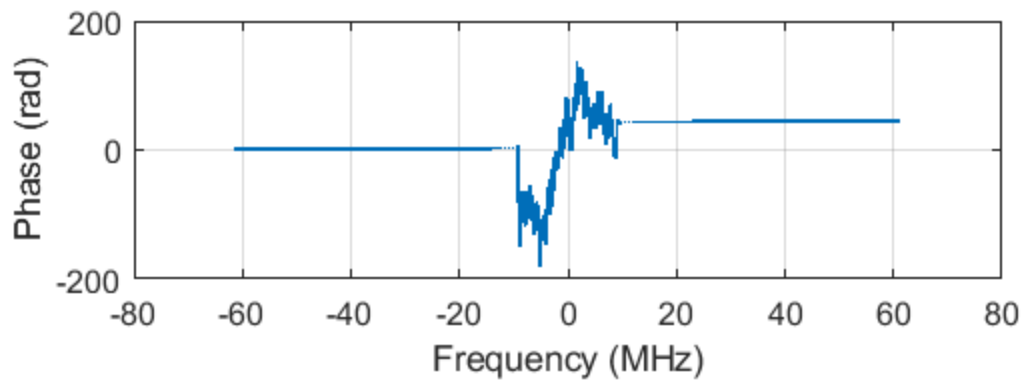

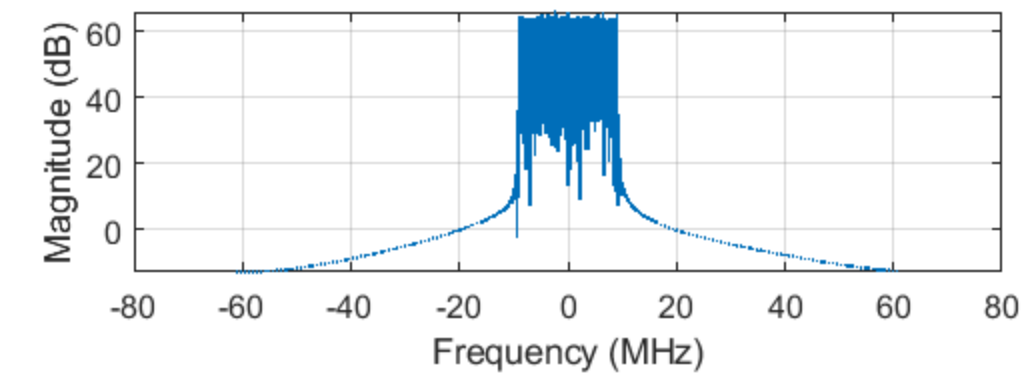

Creating baseband time vector

```
time_baseband_complete = (0: freq_baseband*resample_duration).' /  
    freq_baseband;
```

```
% Computing interpolation  
s1_baseband_complete = interp1(s1_time, s1_amp,  
    time_baseband_complete);  
s2_baseband_complete = interp1(s2_time, s2_amp,  
    time_baseband_complete);
```

Plot

```
plot_spectrum(s1_baseband_complete, freq_baseband, 'Signal 1')  
plot_spectrum(s2_baseband_complete, freq_baseband, 'Signal 2')
```

Save complete baseband data

```
complete_file =  
    fullfile(current_folder, 'source_signal_complete.mat');  
save(complete_file, 'time_baseband_complete', 's1_baseband_complete', 's2_baseband_'  
v7.3');  
fprintf('Saved: %s (%d samples)\n', complete_file,  
    length(time_baseband_complete));  
  
Saved: C:\Users\Shoit\Desktop\pa_db_1p8_5p4\fl_source_data  
\source_signal_complete.mat (123001 samples)
```

Split

```
for k = 1:3  
    start_idx = (k - 1) * num_of_points + 1;  
    end_idx = k * num_of_points;  
  
    if end_idx > length(time_baseband_complete)  
        warning('Not enough samples for segment %d, stopping.', k);  
        break;  
    end  
  
    % Extract chunk  
    s1_baseband = s1_baseband_complete(start_idx:end_idx);  
    s2_baseband = s2_baseband_complete(start_idx:end_idx);  
  
    % Reset time to start at zero  
    time_baseband = time_baseband_complete(start_idx:end_idx) -  
    time_baseband_complete(start_idx);  
  
    % Save as MAT file in the same directory as this script  
    save_file = fullfile(current_folder, sprintf('source_signal_'  
%d.mat', k));  
    save(save_file, 'time_baseband', 's1_baseband', 's2_baseband', '-'  
v7.3');  
    fprintf('Saved: %s (%d samples)\n', save_file, num_of_points);  
end  
  
toc
